SCOTT BROTHERS BRINGS NEW BRAND SCOTTair TO MARKET
LAUNCHING THREE NEW EVAPORATIVE COOLERS

(27th February, 2009) Scott Brothers Ltd., the specialist distributor of innovative portable cooling solutions, announces the introduction of three new evaporative coolers under its recently launched SCOTTair brand. SCOTTair is exclusive to Scott Brothers and the new additions complement the company's extensive range of domestic coolers, providing a solution for most types of working environment, now including commercial and industrial applications.

The new models extend the capacity range, which now enables areas from 15m² to 120m² to be cooled effectively using portable equipment, including the SCOTTair SA15 (for areas up to 30m²), the SCOTTair SA35 (for areas up to 45m²) and the SCOTTair SA06 (for areas up to 80m²).

All portable evaporative air coolers from Scott work on the principle of natural air cooling using a low energy fan and the evaporation of cool tap water to reduce the ambient room temperature by up to 30°C. The SCOTTair models are particularly suited to the hire market as they are ideal as portable cooling solutions, and are also suitable for larger open spaces, making them perfect for use at events such as weddings and corporate functions.

- The SCOTTair SA15 is a compact yet powerful evaporative air cooler: weighing just 20kg and fitted with independent castors, it is extremely portable. The powerful centrifugal fan gives a maximum air flow of 1,500 m³/h from a low energy motor using just 170 watts. With a 30 litre capacity water tank it is suited to commercial or domestic applications for areas up to 30m².
- For areas up to 45m² the SCOTTair SA35 generates a staggering 3,500 m³/h air flow rate from a low energy (280 watts) motor. With a 35 litre capacity water tank it is ideal for cooling large open areas, such as reception areas, marquees and offices.
- Specifically designed for commercial applications for areas up to 80m², the SCOTTair SA06 is a robust evaporative air cooler supplied on a steel stand with castors for extra portability. The powerful axial mounted fan gives a maximum air flow of 6000 m³/h from a low energy (290 watts) motor. It is fitted with a large 30 litre capacity water tank and direct water feed.

All models in the Scott range utilize a cooling method which is both energy-saving and environmentally friendly, cooling the air and creating a healthy microclimate. Unique and indispensable, all new SCOTTair coolers are supplied with a long-distance remote control for added convenience and feature an LCD display panel. With a modern aesthetic design the units are also suitable to cool environments such as surgeries, dentists and florists where appearance is important. With all Scott coolers no installation is required and all are extremely quiet – operating in a range between 50dB and 71dB.

Scott Brothers provides full technical, training and spare part support for all evaporative coolers, offering an established market knowledge backed by the world's leading manufacturer Seeley International. Scott Brothers' comprehensive range of evaporative air coolers for the hire and industrial markets includes the successful Mastercool, Commander and Breezair units, which enable areas from 20m² to 120m² to be cooled effectively using portable equipment under the Seeley Convair and Breezair badges, and now also including new SCOTTair models.

Evaporative air coolers are the low cost, low energy, environmentally friendly alternative to refrigerative fixed air conditioning. Unlike conventional air conditioners, evaporative coolers require fresh air, and work best with open windows and doors. Evaporative air coolers are extremely simple to use, cooling the air by an evaporation process, which reduces the temperature of the room, whilst simultaneously delivering a constant flow of fresh, healthy natural air. They also filter dust and dirt and do not dry the air.

For further information on the new range of evaporative air coolers please contact Scott Brothers on +44 (0)1477 539 500, alternatively e-mail sales@scott-air-cooling.co.uk or visit www.scott-air-cooling.co.uk
